XM Satellite radio is the best thing that has happened since television. I love my satellite radio and the service they provide. Often regular radio stations do not provide me with traffic information of NJ highways. Everything is about NYC roads. I will flip channel to channel with no information about the traffic I would be in. With my XM satellite radio I listen to the reports before I leave for work so that I can avoid the heavy traffic and plan an alternate route to get to work. They are the only ones that report on all the major highways of NJ. This radio has been a time saver for me and my job thanks them for it too. Also, to have the weather information at hand is very helpful. The other XM stations are also remarkable, I can listen to all the great old time radio shows from the 30s - 50s, I can learn when I drive with the Discovery channel, listen to live news coverage or sports in digital sound. There are so many other stations that I enjoy, infact it's hard to choose which one I want to listen to when in my car or at home. I pay for this great service and it should not be up to the NAB to decide what I or anyone else is permitted to hear.
